

**Mudalgi Education Society's
Arts and Commerce College, Mudalgi
Dist: Belagavi) (State: Karnataka
Accredited at B⁺⁺ Level by NAAC**

Programme and Course Outcomes

1) B.A. in Geography; 2021-22

The POs of B.A. in Geography Programme:

The programme outcomes relating to the B.A. programme in Geography are:

- Demonstrating an understanding of basic concepts in geography.
- Demonstrating the coherent and systematic knowledge in the discipline of geography to deal with current issues and their solutions.
- Display an ability to read and understand maps and topographic sheets to look at the various aspects of the space.
- Cultivate the ability to critically evaluate the wider chain of spatial aspects from global to local levels on various time scales as well.
- Recognize the skill development in the Geographical Studies programme as part of career avenues in various fields like teaching, research, and administration.

It is also suggested that after the completion of the B.A. programme, students should be able to demonstrate the knowledge they have obtained in such a way that they can explore their employability options and serve the society.

The Program Specific Outcomes (PSOs) of B.A. in Geography Programme:

By the end of the program the students will be able to:

PO1: Relating to Knowledge: Give better explanation about relevant principles, theories and models in geography.

P02: Understanding and Application: Comprehend how processes bring changes in systems, distributions and environments.

P03: Students Skills: Demonstrate skill of analysis and synthesis of geographical information

P04: Students Evaluation: Critically evaluate geographical principles, theories and models.

B. A. Ist & IInd Semester:

NEP-2020 CBCS Pattern; 2021-22

B. A. Ist Semester:

DSC T1: Principles of Geomorphology

DSC P1: Topographical Analysis

OEC: Introduction to Physical Geography

Discipline Specific Core (DSC) Courses: THEORY

Title of the Course: Principles of Geomorphology

Course Outcomes:

After the completion of this course, students should be able to:

1. Define the field of Geomorphology and to explain the essential principles of it.
2. To outline the mechanism of dynamic nature of the Earth's surface and interior of the Earth.
3. To illustrate and explain the forces affecting the crust of the earth and its effect on it.
4. To understand the conceptual and dynamic aspects of landforms development.

Discipline Specific Core (DSC) Courses: PRACTICAL

Title of the Course: Topographical Analysis

After the completion of this course, students should be able to:

1. Understand and read topographical maps.
2. Acquire knowledge to prepare various types of relief features from a geographical area and the ability to interpret them.
3. Comprehend locational and spatial aspects of the earth's surface through SOI toposheets.
4. The use and importance of maps for regional development and decision-making

OPEN ELECTIVE (OE) Courses: THEORY

Title of the Course: Introduction to Physical Geography

Course Outcomes:

After the completion of this course, students should be able to:

1. Students will be able to understand the fundamental concepts in Earth Sciences.
2. Associate and bring out the relationships of the features of one sphere with those of other spheres.
3. Understands basic terminology used to describe physical processes and landscape forms.
4. Understanding the elements of weather and climate phenomena, dynamics of global climates, and interactions between living organisms and their climate and physical environment
5. Appreciate the bottom configuration of different oceans, such as the evolution of the oceans, the physical and chemical properties of seawater, and atmospheric and oceanographic circulation.

B. A. IInd Semester:

DSC T2: Introduction to Climatology

DSC P2: Weather Analysis

OEC: Introduction to Human Geography

Discipline Specific Core (DSC) Courses: THEORY

Title of the Course: Introduction to Climatology

Course Outcomes:

After the completion of this course, students should be able to

1. Define the field of climatology and to understand the atmospheric composition and structure.
2. To outline the mechanism and process of solar radiation transfer to earth surface and to explain the temperature distribution and variation according to time and space.
3. To illustrate and explain the air pressure system, wind regulating forces and the formation of the Atmospheric Disturbance.
4. To understand and compute the air humidity as well as to explain the process of Condensation and formation of precipitation and its types.

Discipline Specific Core (DSC) Courses: PRACTICAL

Title of the Course: Weather Analysis

After the completion of this course, students should be able to:

1. Understand and use the weather maps published by IMD Pune.
2. Comprehend locational and spatial aspects of the weather phenomena on the earth's surface.
3. The use and importance of maps for regional development and decision-making
4. Understanding the elements of weather and climate phenomena, dynamics of global climates, and interactions between living organisms and their climate and physical environment.

OPEN ELECTIVE (OE) Courses: THEORY

Title of the Course: Introduction to Human Geography

Course Outcomes:

After the completion of the course, the students will have the ability to:

1. Students will learn how human, physical, and environmental components of the world interact.
2. Students will be familiarized with economic processes such as globalization, trade and their impacts on economic, cultural and social activities.
3. The student will describe what geography and human geography are.
4. Understand population dynamics and migration.

B. A. IIIrd & IVth Semester:

CBCS Pattern; 2020-21

B. A. IIIrd Semester:

DSC: 3.1 Human Geography

Course Outcomes:

After the completion of the course, the students will have the ability to:

1. Students will learn how human, physical, and environmental components of the world interact.
2. Students will be familiarized with economic processes such as globalization, trade and their impacts on economic, cultural and social activities.
3. The student will describe what geography and human geography are.
4. Understand population dynamics and migration.

DSC: 3.2 Map Projections

Course Outcomes:

After the completion of the course, the students will have the ability to:

1. Distinguish between various types of maps and appreciate the elements of a map.
2. Appreciate how projections are applied to prepare maps from the globe.
3. Acquire knowledge to prepare various types of relief features from a geographical area and the ability to interpret them.

SEC: 3.3 Basics of Physical Geography

Course Outcomes:

After the completion of this course, students should be able to:

1. Students will be able to understand the fundamental concepts in Earth Sciences.
2. Associate and bring out the relationships of the features of one sphere with those of other spheres.

3. Understands basic terminology used to describe physical processes and landscape forms.
4. Understanding the elements of weather and climate phenomena, dynamics of global climates, and interactions between living organisms and their climate and physical environment
5. Appreciate the bottom configuration of different oceans, such as the evolution of the oceans, the physical and chemical properties of seawater, and atmospheric and oceanographic circulation.

B. A. IVth Semester:

DSC: 4.1 Regional Geography of Karnataka

Course Outcomes:

After the completion of the course, the students will have the ability to:

1. Karnataka regions in terms of various physical divisions, their important characteristics and intra-regional disparities in agriculture and industries, and to analyse natural and human resource endowments and their conservation and management.
2. Study the resource endowment and its spatial distribution and utilisation for sustainable development.
3. Synthesize and develop the idea of regional dimensions to reduce the impact of imbalances.
4. To achieve knowledge, understand the regional strengths of Karnataka state, and motivate the students for competitive exams.

DSC: 4.2 Basic Statistics

Course Outcomes:

After the completion of the course, the students will have the ability to:

1. Understand the basics of data collection and processing for meaningful outcomes.
2. Comprehend the representation and interpretation of the various types of statistical methods such as classification and tabulation of data, formation of frequency distribution, measures of central tendency, and measures of dispersion.
3. Put into practise the results obtained in representation as well as day-to-day life.

SEC: 4.3 Geography of Karnataka

Course Outcomes:

After the completion of the course, the students will have the ability to:

1. Karnataka regions in terms of various physical divisions, their important characteristics and intra-regional disparities in agriculture and industries, and to analyse natural and human resource endowments and their conservation and management.
2. Study the resource endowment and its spatial distribution and utilisation for sustainable development.
3. Synthesize and develop the idea of regional dimensions to reduce the impact of imbalances.
4. To achieve knowledge, understand the regional strengths of Karnataka state, and motivate the students for competitive exams.

B. A. Vth & VIth Semester:

Non-CBCS Pattern; 2018-19

B. A. Vth Semester:

Theory Paper: Regional Geography of India:

Course Outcomes:

After the completion of the course, the students will have the ability to:

1. Learn the differences in terms of the varied physiography of India and intra-regional and inter-regional linkages, and analyse natural and human resource endowments and their conservation and management.
2. Understand the demographic component and settlement structure in India.
3. Study the economy and various types of resources in India.
4. Study the synthesis of development issues and policies and programmes designed for regional development.

Theory Paper: Settlement Geography:

The course-level learning outcomes include the following:

1. Understand the spatial and structural characteristics of human settlement under varied environmental conditions to enable them to diagnose spatial issues related to urban and rural settlements.
2. Analyse the types and patterns of rural and urban settlements, urbanization, and related issues in India and other regions of the world.
3. Know the dichotomy of rural and urban settlements and urbanisation in the world and in India.
4. Appreciate and understand various theoretical features of the urban spheres with local, regional, and global examples.

Practical Paper: Interpretation of Weather Reports and Basic Statistics:

The course-level learning outcomes include the following:

1. Understand and use the weather maps published by IMD Pune.
2. Comprehend locational and spatial aspects of the weather phenomena on the earth's surface.
4. The use and importance of maps for regional development and decision-making
5. Understand the basics of data collection and processing for meaningful outcomes.
6. Comprehend the representation and interpretation of the various types of statistical methods such as classification and tabulation of data, formation of frequency distribution, measures of central tendency, and measures of dispersion.
7. Put into practise the results obtained in representation as well as day-to-day life.

B. A. VIth Semester:

Theory Paper: Human Geography

Course Outcomes:

After the completion of the course, the students will have the ability to:

1. Understand the basic concepts in various sub-fields of human geography.
2. Understand the nature of the man-environment relationship and the human capability to adopt and modify the environment under its varied conditions, from the primitive lifestyle to modern living.
3. Appreciate the growth, distribution, and composition of the population in different parts of the world.
4. Analyse the types and patterns of rural and urban settlements, urbanization, and related issues in India and other regions of the world.

Theory Paper: Environmental Geography

Course Outcomes:

After the completion of the course, the students will have the ability to:

1. Appreciate the ideas of environment, ecology, and the structure and functions of ecosystems with examples.

2. To apprise the interrelationship between man and the environment in which he lives and his linkages with other organisms.
3. Understand the environmental problems and relevant management strategies.
4. Acquire knowledge about the new environmental policies and the need to revise policies to tackle the environmental issues in India, in particular.

Practical Paper: Map Projections and Field Works and Dissertation:

Course Outcomes:

After the completion of the course, the students will have the ability to:

1. Distinguish between various types of maps and appreciate the elements of a map.
2. Appreciate how projections are applied to prepare maps from the globe.
3. Acquire knowledge to prepare various types of relief features from a geographical area and the ability to interpret them.
4. Conduct field work in various aspects of local and regional geography, besides investigating socio-economic and environmental issues.
5. Develop tools to collect primary data from the field and interpret it meaningfully.
6. Prepare a field report with suitable tables, maps, and diagrams based on the data collected from the field and secondary sources.
7. Field-based knowledge is essential to understanding ground reality, spatial patterns, and processes.

---000---

2) Programme in B.A./B.Com English:

Program and Course outcomes:

BA First and Second Semester students are acquainted with the basic grammar components such as concord, possessive pronouns and adjectives, synonyms and antonyms, articles and prepositions, writing skills (paragraphs) letter writing, resumes writing and the use of maxims.

Optional students are acquainted with the basic literary terms and literary forms such as simile, metaphor, climax, personification, sonnet, lyric ballad, tragedy, comedy short story, etc. Students are acquainted with the British writer and different period of English literature.

B.A. Third and Fourth Semester students are acquainted with modern English grammar elements such as sentence patterns, sentence structures, sentence processes, determiners, modifiers, clauses, phrases, etc. The representative poems and prose lessons helped students to know about the life values and nature's descriptions. The prose lessons acquainted the students with the mighty minds such as Tolstoy, Abraham Lincoln, Charles Darwin, St. Joan.

B.A. Fifth and Sixth Semester students were acquainted with the origin of the English language and different periods in the history of the English language. The discussion on the vocabulary helped students to know the contributions of the Greek, Latin, French languages to the development of the English language. The topics on the literary criticism helped students to know the latest developments in the field of literary criticism. The modern critics like Allen Tate, Empson, I. A. Richards and their

literary theories were discussed in detail. The knowledge of the English phonetics helped the students to get acquainted with the 44 English speech sounds and the stress patterns.

B.Com. students were also acquainted with the general English components such as correction of sentences, active and, passive voice, the use of articles and prepositions, resume writing, synonyms and antonyms, writing ads, brochures, etc.

BA Programme Outcome

1. Improving knowledge in the field of Economics.
2. Create aspiration to pursue P.G. Degree in Economics.
3. Motivate decision making capacity in economic and social aspects of life.
4. Develop responsible and rational behavior.
5. Motivate to Prepare for competitive exams.

BA Course Outcomes

Micro Economics-I

Understand the nature and scope of Economics.
Acquire knowledge about basic concepts of Economics.
Understand theories related to consumer behavior.

Micro Economics-II

Understand the concepts of Cost, Revenue and Market.
Know the price and output fixation in different types of market
Understand theory of distribution
Understand theories related Wage, and rent to, Interest and Profit.

Monetary Economics

Understand role of money in modern economy and paper currency standard.
Understand theories of value of money and concept of Index Number.
Understand causes, effects and control of inflation and deflation.
Understand working of money and capacity market.

International Economics

Understand importance and reasons for international trade
Understand merits and demerits of free trade and protective trade policy.
Understand the concept of BOP and foreign exchange.

Paper-I Macro Economics
